

Eco Contractors and Consultants

These are some installers who operate in our local area and the South East. By providing this list, OVESCO does not endorse their services and you should carry out your own enquiries. We would encourage you to obtain at least two quotes when planning any installation and ask for two references, perhaps even ask to visit an installation. We understand that the installers have the relevant qualifications needed for the works they propose, but please undertake your own checks on this point too.

To access the [Boiler Upgrade Scheme](#) grant of £7,500, heat pump or biomass installers must be MCS accredited.

To enable payment for solar generation under [Smart Export Guarantee](#), Solar PV Installers must be MCS accredited.

You can find out more about MCS certification and check installers here: www.mcscertified.com
